

KITCHEN PLUMBING DIRECTIVE

The City of Rogers requires that the following fixtures located in or adjacent to a kitchen area be plumbed to the grease interceptor:

1. All sinks (i.e. 3-compartment sinks, 2-compartment sinks, single compartment sinks, prep sinks, rinse sinks, hand wash sinks and mop sinks)
2. All floor drains, floor sinks and trench drains
3. Dishwashers and/or pan washers

The City of Rogers prefers that a food service business not install a garbage disposal or food grinder in conjunction with any of their kitchen sinks. The City requires that they screen (using screens and/or baskets) their sink drains, which will allow the liquids to pass through but contain the food solids. They would then collect these food solids and dispose of them in the trash receptacle as a solid waste.

However, if they do elect to install a garbage disposal or food grinder, they shall be required to connect the garbage disposal or food grinder to a solids interceptor prior to connecting it to the grease interceptor (see Solids Interceptor Directive).
